

# Installation of tailwind in React....

1 . npm install -D tailwindcss postcss autoprefixer

2 . npx tailwindcss init -p

3. Open **tailwind.config.js** and add paths:

```
/** @type {import('tailwindcss').Config} */
module.exports = {
  content: [
    "./src/**/*.{js,jsx,ts,tsx}",
  ],
  theme: {
    extend: {},
  },
  plugins: [],
}
```

4. npm install -D tailwindcss @tailwindcss/postcss postcss autoprefixer

5.create/edit **postcss.config.js** (or **.mjs**) in project root:

```
// postcss.config.mjs or .js depending
export default {
  plugins: {
    "@tailwindcss/postcss": {},
    autoprefixer: {},
    // maybe postcss-import if you use @import in CSS files
  },
};
```

6.your global CSS file (e.g., **src/index.css**):

```
@import "tailwindcss";
```
